
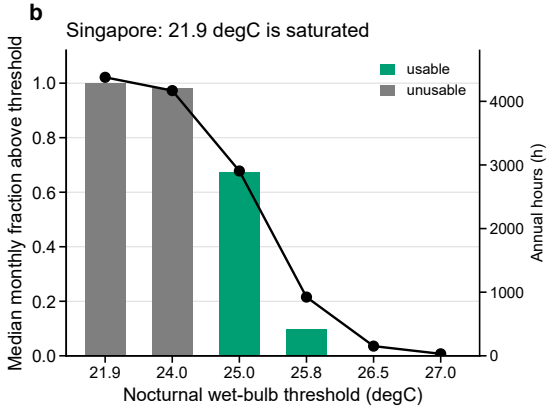
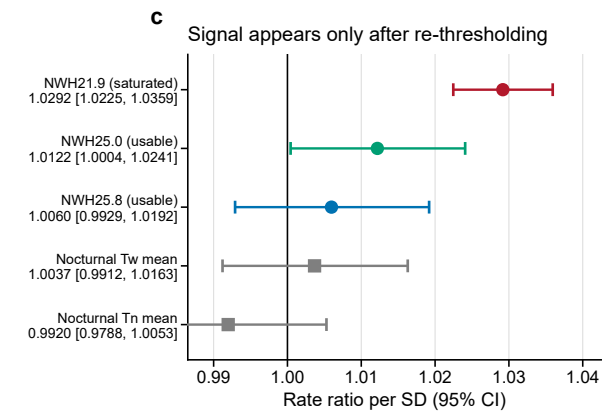
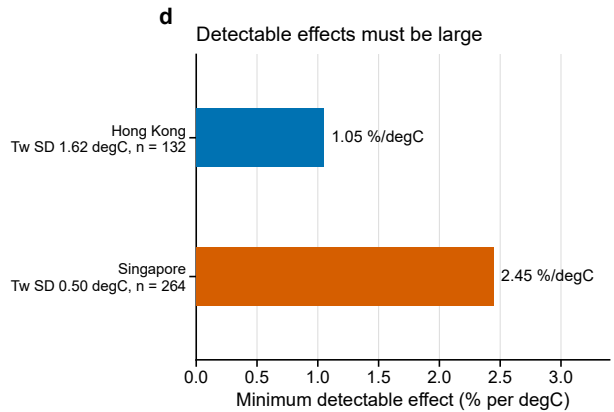
Meta I2 = 0.0%. Monthly panel, warm season only; the fixed-effect meta is the pre-specified summary.



Bars: median monthly exceedance fraction. Line (right axis): annual hours above threshold.



NWH21.9 (red) is a RETRACTED ARTEFACT: monthly SD 10.6 h and a median exceedance fraction of 1.000, so z = +8.61 reflects night length.



Singapore needs a 2.33x larger effect than Hong Kong because its warm-season Tw contrast is only 0.50 degC.
